

Project 0

- 1- Connect an LED and a switch-button to your KL25Z board.
- 2- The LED will light up to full light in 5 steps. You start at LED=0, and Increase light intensity 20% per step until you get to full light intensity. Each step starts by pressing the switch button. Do this part with the PWM class.
- 3- Repeat part two without using the PWM class. Only use the DigitalOut class.
